AI Skills Assessment: your self-guide

Oct 24, 2026 · @Scott Stockwell

What this assessment is

The AI Skills Assessment shows where you stand on six AI skill areas and what to build next. It takes about 10 minutes and runs in your web browser. Think of it as a fitness test rather than an exam: there are no pass marks, only a clear picture of where to train.

You rate yourself from 0 (no awareness) to 4 (champion) on each area: AI literacy and concepts; ethical and responsible AI; AI tools and practical application; data and privacy governance; change leadership and AI strategy; and AI application to organisational strategy. Under each slider you see the specific skills that make up your next level, including where a skill links to the EU AI Act.

Before you start

- **Time:** about 10 minutes, in one sitting. Your ratings are lost if you close the page before downloading.
- **Device:** a laptop or tablet with a current web browser.
- **Think of recent examples:** the AI tools you have used at work, and any policy your organisation has on AI.
- **Name:** enter your name or initials. If your organisation prefers pseudonymised data, use a staff code. Your facilitator will tell you which.
- **Be candid:** a higher rating does not help you. Your manager or a peer may rate you separately, and differences are used to start a conversation, not to mark anyone down.

Step by step

1. Open the link your facilitator gave you and choose the **Self-assessment** tab.
2. Leave Rater type as "Self-assessment". Enter your name or initials and your team.
3. For each area, move the slider to the level that best describes you today. Read the "Next step" box beneath it: if you can already do most of those things, move up. If you cannot yet do most of your current level, move down.
4. Check the summary at the bottom: average level, lowest area and number of priority gaps.
5. Click **Download results (XLSX)** and send the file to your facilitator in the way they tell you. Keep a copy for yourself.

Example: you use an AI assistant every week and check its outputs for accuracy, but you have never chosen or evaluated a tool for your team. In AI tools and practical application, that is Developing (2), not Proficient (3).

The five levels

Level	Name	What it looks like	Example skill
0	Unaware	No awareness of AI or its implications	Has not used an AI tool at work
1	Aware	Understands AI at concept level, limited hands-on use	Can explain generative AI in plain language and has tried one assistant
2	Developing	Uses AI regularly and checks what it produces	Writes prompts, iterates, and reviews outputs for accuracy and bias
3	Proficient	Applies AI strategically, leads projects, coaches others	Selects tools for a business problem and trains colleagues on safe use
4	Champion	Organisational authority who shapes policy	Defines the approved tool catalogue and leads build-versus-buy decisions

A second view and the team picture

Second rater. Your manager or a peer can complete the same form independently. They choose Manager feedback or Peer feedback, enter the same name or initials as yours, and download their own file.

Team rollup (facilitator). The facilitator opens the Team rollup tab and loads everyone's files. The page shows average scores by area, each person's results, and calibration flags where a manager or peer rating differs from the self-rating by more than one level. Think of two people estimating the same distance with different tools: the gap between them is the useful part. A flag is a prompt for a development conversation, not a mark against anyone.

Files must come from this tool. Any other file is skipped with a message saying why.

Your data and AI literacy records

Nothing is uploaded. Your ratings stay in your browser tab until you close it, and the only copy is the XLSX file you download. That file holds your name or initials, team, rater type, date and scores, so store and share it as you would any other personal data under your organisation's policy.

On the EU AI Act: Article 4 requires providers and deployers of AI systems to take measures to support the AI literacy of their staff and others who use AI systems on their behalf. It does not require a certificate or a guaranteed level for any individual, and the European Commission says internal records of trainings and other initiatives are sufficient. Keeping your downloaded results and the development plans that follow is a reasonable part of those records. Ask your own legal adviser what your organisation must keep. This guide is not legal advice.

Common questions

- **Must I rate the same level in every area?** No. Most people differ from one area to the next.
- **What if I am between two levels?** Choose the lower one you can fully show today. The "Next step" box lists what would move you up.
- **Can I start again?** Yes. Choose Reset ratings, or refresh the page, then download again.
- **Why is there no login or save button?** Nothing is stored. The downloaded file is your save.
- **Does it score or rank me?** No. It gives levels per area and next steps. Your organisation decides how results are used.
- **What does the orange EU AI Act label mean?** That skill links to an AI Act obligation. Many obligations apply only to high-risk AI systems, or only to organisations that build AI, so a label does not mean the obligation falls on your role.
